P0007

US PAT NO: 3,888,866

L2: 18 of 18

TITLE: Nitrogen derivatives of benzoyl ecgonine

ABSTRACT:

Nitrogen derivatives of benzoyl ecgonine and cocaine are provided, particularly amino, diazonium, and diazo derivatives, the compounds finding use either directly or as intermediates for the preparation of reagents for use in immunoassays. Diazo compounds can be coupled with antigenic materials for the preparation of antibodies to benzoyl ecgonine and/or cocaine. The amino group can be combined with active non-oxo-carbonyl compounds to form reagents which find use in immunoassays.

L6 ANSWER 1 OF 2 COPYRIGHT 1992 ACS

CA115(23):251138p Single photon emission computed tomography imaging of monoamine reuptake sites in primate brain with [123I]CIT. Innis, Robert; Baldwin, Ronald; Sybirska, Elzbieta; Zea, Yolanda; Laruelle, Marc; Al-Tikriti, Mohammed; Charney, Dennis; Zoghbi, Sami; Smith, Eileen; et al. (VA Med. Cent., West Haven, CT 06516, USA). Eur. J. Pharmacol., 200(2-3), 369-70 (Eng) 1991. CODEN: EJPHAZ. ISSN: 0014-2999.

AB [123I]CIT [2.beta.-carbomethoxy-3.beta.-(4-iodophenyl)tropane] was evaluated for SPECT (single-photon emission computed tomog.) of dopamine and serotonin reuptake sites in baboon (*Papio anubis*) brain. Highest activities were obsd. in the striatum and reached peak levels at 179 min postinjection. The hypothalamus had the 2nd highest levels, peaking at 45 min after injection. (-)-Cocaine and 2.beta.-carbomethoxy-3.beta.-(4-fluorophenyl)tropane (dopamine and serotonin reuptake inhibitors, resp.) induced rapid and dose-dependent displacement of both striatal and hypothalamic activities. The results indicate that [123I]CIT may be useful for SPECT of dopamine and serotonin reuptake sites in brain.

IT 137433-20-6

(single-photon emission computed tomog. with, of dopamine and serotonin reuptake sites in brain)

L6 ANSWER 2 OF 2 COPYRIGHT 1992 ACS ✓

CA115(21):232566k [123I]-2.beta.-carbomethoxy-3.beta.-(4-iodophenyl)tropane: high-affinity SPECT (single photon emission computed tomography) radiotracer of monoamine reuptake sites in brain. Neumeyer, John L.; Wang, Shaoyin; Milius, Richard A.; Baldwin, Ronald M.; Zea-Ponce, Yolanda; Hoffer, Paul B.; Sybirska, Elzbieta; Al-Tikriti, Mohammed; Charney, Dennis S.; et al. (Res. Biochem. Inc., Natick, MA 01760, USA). J. Med. Chem., 34(10), 3144-6 (Eng) 1991. CODEN: JMCMAR. ISSN: 0022-2623. OTHER SOURCES: CJACS.

AB In order to develop radioligand probes suitable for PET and SPECT imaging of cocaine receptors, iodophenyltropanes I (R = iodo, 123I, R1 = Me; R = iodo, R1 = H) and the 2.alpha. isomer of I (R = iodo R2 = Me) were prepd. from ecgonidine Me ester. I (R = 123I, R1 = Me) was obtained in av. overall yield of 60.0 +/- 13.4% and radiochem. purity of 97.6 +/- 1.6%. The affinities of I (R = iodo, R1 = Me) its epimers, and I (R = F, R1 = Me) for the dopamine and serotonin reuptake sites were detd. from radioligand displacement studies using tissue homogenates prepd. from baboon brain. Highest brain uptake overlay the striatal region and peaked at 154 +/- 19 min post injection and showed striatal to cerebellar ratios of 9.8 +/- 1.6. The in vivo displacement SPECT expts. support the notion that the majority of striatal activity following injection of I (R = 123I, R1 = Me) was assocd. with dopamine reuptake sites.
